STAY AHEAD OF THE COMPETITION WITH ADVANCED TRAINING

INFINITI'S TWO-DAY SCANNING AND ADAS CALIBRATIONS COURSE

THE FUTURE IS NOW FOR ADAS-EQUIPPED VEHICLES

There are already over 60 million vehicles in the United States that have ADAS, and that number keeps growing. INFINITI vehicles feature complex ADAS technologies that require following OEM repair procedures for proper repairs and calibrations where necessary.

HANDS-ON EXPERIENCE

This two-day advanced training course includes plenty of hands-on experience and is designed for technicians from INFINITI and Nissan Certified Collision Centers who perform the scanning and calibrations on ADAS systems.

The course size is limited to 10 technicians to allow each technician to gain practical experience and to ensure competency.

Prior to attending the instructor-led course, students are required to complete three pre-course assignments, including eLearning modules.

WHAT WE'LL COVER

1. Scanning using the CONSULT or the asTech® remote diagnostic device connected to the CONSULT.
2. Researching and resolving DTCs.
3. Troubleshooting and calibrating:
 - Front Radar-Based Systems
 - Lane Camera Units Systems
 - Sonar and Side Radar Systems
 - Exterior Camera Systems
 - Tire Pressure Monitoring Systems

WHAT TECHS ARE SAYING

"The facility was awesome. The instructors were awesome. I think it is a great class and everyone that is a certified shop should take it."

Ryan Lavenburg, Daku Auto Body Shop

"I'm not sure how you could repair one of these vehicles properly without the knowledge from the course and without the ability to navigate TechInfo."

Evan Bernhard, RCI Collision

"If you are going to be a certified shop, I would highly recommend this class. You'll be ahead of the curve on calibrations."

Brad Wiersma, Randy's Body Shop

COURSE LOCATION

asTech Training Center
6700 Southpoint Parkway, Suite 100
Jacksonville, FL 32256
